

## M492 Histosette® II

### Tissue Processing/Embedding Cassettes

Made of acetal polymer

Disposable plastic cassettes that hold tissue specimens during processing and embedding, as well as in storage. Moulded from a special high-density polymer, these patented cassettes keep specimens safely submerged in liquid and are totally resistant to the chemical action of histological solvents. The efficient flow-through slots maximize fluid exchange and ensure proper drainage. The one-piece integral lid eliminates the need for separate steel lids. They can be opened and closed as often as necessary and will always relock securely without danger of specimen loss. Large labelling areas are located on three sides of the cassettes for your convenience.

The anterior writing area is slanted at a 45° angle to make the cassette more suitable to be used with certain types of cassette labelling instruments.

Available in non-cytotoxic, non-metallic colours. Each case contains 3 dispenser boxes of 500 cassettes.

## M493 Histosette® II

### Biopsy Processing/Embedding Cassettes

Made of acetal polymer

Similar to M492 but specially designed to hold biopsy specimens during the embedding process, as well as in a storage cabinet. Anterior writing area is at a 45° angle to make the cassette more suitable to be used with certain types of cassette labelling instruments. Each case contains 3 dispenser boxes of 500 cassettes.

## Anatomy of a Histosette® II

Unique front hinge design allows single handed cassette manipulation.

Unobstructed front writing surface sloped at 45° makes the cassette compatible with most automated cassette labelling machines

Patented

Back mounted locking device securely holds the lid in place and will never open during processing.

Efficient flow-through slots in lid and base maximize fluid exchange, thereby ensuring proper drainage.
